BUILDING OPERATIONS FOR SEPTEMBER

Following is a list of contracts awarded, published by the F. W. Dodge Co., throughout the States of New England, New York, New Jersey, Pennsylvania, Maryland, Delaware, District of Columbia, Virginia, Ohio, West Virginia, Illinois, Indiana, Iowa, Wisconsin, Michigan, North and South Dakota and portions of Missouri and eastern Kansas:

January 1 to October 1, 1916	$970,251,397
January 1 to October 1, 1915	680,615,100
January 1 to October 1, 1914	579,042,100
January 1 to October 1, 1913	682,425,500
January 1 to October 1, 1912	627,477,000
January 1 to October 1, 1911	607,638,813
January 1 to October 1, 1910	633,002,305

Contracts awarded from New York State and northern New Jersey:

January 1 to October 1, 1916	$180,803,500
January 1 to October 1, 1915	120,400,500
January 1 to October 1, 1914	100,266,000
January 1 to October 1, 1913	214,106,500
January 1 to October 1, 1912	186,517,000
January 1 to October 1, 1911	183,429,000
January 1 to October 1, 1910	186,084,000

These figures for the entire territory show that to date 1916 is the largest building year for contracts awarded which we have had, and for the territory of New York State and northern New Jersey, this year is about the same as 1910, 1911 and 1912. The contracts for the larger territory during September amounted to $132,226,475, and for the smaller territory $35,718,000. These figures are against $142,000,000 for the larger territory in August, and $114,000,000 for July, and for the smaller territory of $40,000,000 in August and $29,000,000 for July, both territories showing a little falling off against August, but an increase over July.

Railway Construction by Bolivian Government—The call of the Bolivian Government for bids on the construction of the Potosi-Sucre Ry. has been annulled by a decree of Aug. 1, 1916. No bids having been received, according to the "West Coast Leader," the government has decided to proceed with the construction of the railway through the Public Works Department, using the final surveys made by W. L. Milner. It is stated that funds are available to begin the work of construction, and a loan may be negotiated later, with the constructed portions of the road as security. The Potosi-Sucre Ry. is an extension of the Rio Mulato branch of the Antofagasta & Bolivia Ry.

Asphalt Shingles for Panama—For the roofing of permanent dwelling houses and hospital buildings on the Isthmus, the Panama Canal authorities have placed orders with the Barber Asphalt Paving Co., Philadelphia, for nearly 3,000,000 slate-surfaced asphalt shingles. The factors which lead to this form of roofing are stated as follows: Asphalt shingles are as low in cost as, or lower than corrugated iron; they make a better-looking roof, do not increase the fire risk, save painting and resist the deteriorating effect of sea air.

SPECIAL OPPORTUNITIES SECTION

Contracts To Be Let

Bids received until Oct. 10, 1916.

Bulkhead and Gates

Augusta, Ga., Sept. 25th, 1916.

Sealed proposals addressed to the City Council of Augusta, Georgia, will be received by the River and Canal Commission at Augusta, Ga., until four (4:00) o'clock P.M., Tuesday, October 10th, 1916, for furnishing all necessary outfit, material and labor and constructing complete reinforced-concrete bulkhead and steel gates for water control across Butler's Creek in Richmond County, Georgia, where the flood-protection levee crosses said creek. Foundation will be on piles. Height above foundation, 35 feet; clear span between wing walls, 65 feet; 6 gate openings 8 feet x 15 feet; length wing wall each end, 145 feet; approximate quantities of material—10,350 lineal feet foundation piles, 33,000 feet B.M. sheet-piling (6 inches x 12 inches), 6,000 cubic yards earth excavation, 1,980 cubic yards concrete, and 40 tons reinforcing steel.

Contract wil be let as a whole. Payment in cash on monthly estimates. With bid must be deposited certified check for $500 as a guarantee of good faith. Said deposit will be returned to bidder when contract is executed.

The successful bidder must give construction bond in the sum of $15,000.

The right is reserved to reject any and all bids.

Plans and specifications may be had by prospective bidders on application to the undersigned.

NISBET WINGFIELD,
Chief Engineer,
811 Ellis Street, Augusta, Ga.

Bids received until Oct. 17, 1916.

Barge Canal Work

STATE OF NEW YORK
OFFICE OF SUPERINTENDENT OF PUBLIC WORKS

Alb[illegible] Sept. 18th, 1916.

Sealed propo[illegible] received by the undersigned [illegible] in the Capitol at Albany, N. Y., until twelve o'clock noon of Tuesday, October 17th, 1916, at which place and hour they will be publicly opened and read, for improving the New York State canals pursuant to the provisions of Chapter 147 of the Laws of 1903, and of the acts amendatory thereof and supplementary thereto, and Chapter 570 of the Laws of 1915, as follows:

1

CONTRACT NO. 19-A.

Erie Canal—Section 11.

For re-dredging Contract No. 19 and incidental work.

Sheets 1 to 13 inclusive.

2

CONTRACT NO. 139.

Oswego Canal—Section 1.

For excavating a channel in the Oswego River from the lower end of Lock No. 8 at Oswego to deep water.

Length 0.19 mile. Sheets 1 and 2.

3

CONTRACT NO. 140.

Champlin Canal—Section 1.

For placing bank protection along the west shore of the Hudson River about five miles north of Waterford, and incidental work.

Sheets 1 and 2.

And for the construction of Barge Canal terminals pursuant to the provisions of Chapter 746 of the Laws of 1911, and of the acts amendatory thereof, as follows:

4

TERMINAL CONTRACT NO. 19.

For dredging, for constructing a new bulkhead wall and a pier, and for repairing two existing piers and a bulkhead at Greenpoint, Brooklyn, N. Y.

Contract plans sheets 1-33.

5

TERMINAL CONTRACT NO. 26.

For constructing a pier and dredging a terminal basin in Lake Champlain at Rouses Point.

Contract plans sheets 1-4.

6

TERMINAL CONTRACT NO. 53.

To construct a dockwall along Dead Creek and around Ohio Basin, to dredge the basin and to construct a bascule bridge across Dead Creek at Ohio street, in the City of Buffalo.

Contract plans sheets 1-36.

Plans may be seen and detailed specifications, engineer's estimate of quantities, proposal blanks, form of contract and bonds required and other information for proposers may be had at the office of the Superintendent of Public Works at Albany, N. Y.; at the office of the Assistant Superintendent of Public Works for the Middle Division at Syracuse, N. Y.; at the office of the Assistant Superintendent of Public Works for the Western Division at Rochester, N. Y., and at the canal office, Spaulding's Exchange, Buffalo, N. Y.

Copies of detailed plans of drawings may be obtained from the State Engineer and Surveyor at Albany, N. Y., upon payment to him of the cost of producing them.

Monthly estimates will be paid of ninety per centum (90 per cent.) of the work done at the contract price. Every proposal for said work must be accompanied by a money deposit in the form of a draft or certified check upon some good banking institution in the city of Albany or New York, issued by a national or state bank (or trust company in the case of terminal contract) in good credit within the state and payable at sight to the Superintendent of Public Works for five per centum (5 per cent.) of the amount of the proposal.

The person whose proposal shall be accepted will be required to execute a contract and furnish bonds within ten days from the date of notice of award delivered to him or them in person or mailed to the address given in the proposal.

Upon execution of the contract and approval of bonds, the certified check or draft will be returned to the proposer unless the same shall have been presented for collection prior to such time, in which case the amount of the deposit will be refunded by the Superintendent of Public Works.

The deposits of bidders other than the one to whom the award of contract shall be made will be returned immediately after the award has been made.

The bond required for the faithful performance of each contract shall be in such sum as shall be fixed by the Superintendent of Public Works, which sum shall not be less than twenty per centum (20 per cent.) of the estimated cost of the work according to the contract price, and an additional bond, known as the labor bond, in the sum of ten per centum (10 per cent.) of the amount of the estimated cost of the work according to the contract price, will be required as security that the contractor will pay in full at least once in each month all laborers employed by him upon the work specified to be done in the contract.

In the event that more than one surety company is offered as surety on said bonds co-insurance only will be accepted.

Each proposal must be addressed to the Superintendent of Public Works, Albany, N. Y., and must be endorsed on the envelope with the name of the construction for which the proposal is made.

Award, if made, will be made to the person or persons whose proposal shall be lowest in cost to the State for doing the work, and which shall comply with all provisions required to render it formal. Before any award shall be made the lowest bidder will be required to satisfy the Superintendent of Public Works of his ability to provide suitable equipment and materials for the proper performance of the work.

The right is reserved to reject all proposals and readvertise and award the contract in the regular manner if, in the judgment of the undersigned, the interests of the State will be enhanced thereby.

W. W. WOTHERSPOON,
Superintendent of Public Works.

⁂

Bids received until Oct. 10, 1916.

INDUSTRIAL CHANGES IN EUROPE

In an address by Edward N. Hurley, Chn. Federal Trade Comn., before the annual meeting of the Ohio Bankers Association at Columbus, Ohio, he states that "when we think of Europe we think of a continent engulfed in war, devastated and disordered, but I want to say to you that we must correct that conception. While in many respects we know little of what is going on in the warring nations, we do know that within sound of the guns, almost within reach of the falling shells, Europe is reorganizing her industries. Under the stress of a life-and-death struggle every effort is being made to obtain the highest efficiency in the production, the distribution and the use of commodities of all kinds. Conservatism in industrial ideals and methods has been blasted and shattered to pieces in the shock of war, old systems that normally would have hung on for years have been discarded in a day, old equipment that would have been retained for years has been scrapped as fast as possible for new installations of the most advanced types. New processes are being discovered, new inventions are being made, and new forms of organization are being created. Let me illustrate. Industrially, France has been preëminently the land of small-scale, highly individualized production, but she now lacks human hands. In France little farms that for generations have been farmed practically by hand or with the aid of a horse or two, are being thrown together and farmed coöperatively by tractors, gang plows and modern agricultural implements. France must rely on machinery. Her business men are studying and are applying American systems of manufacture in factory construction, in equipment, and in large-scale, highly systematized production.

"England industrially has been preëminently the land of yesterday. Conservatism was the dominant characteristic of British business. While Massachusetts was making textiles with automatic looms under conditions that permitted one operator to tend from 16 to 24 machines, Lancashire clung to old equipment and conditions under which one operator could tend but 4 machines. But at last England is aroused, and today American books on efficiency and scientific management are being bought by the hundred and studied all over England. The war has compelled Great Britain to make thirty years of industrial progress in thirty months.

"Before the war Germany was probably the most highly organized and efficient manufacturing nation in the world, but in Germany organization and efficiency have been still further developed, and, no matter whether victorious or defeated, the Germany that emerges from the war will be years ahead of the Germany we knew in 1914.

"These changes are of great concern to us. We may not realize this today, because things are coming our way now, but we must look ahead to the future conditions we must prepare to meet. Almost before we know it we will find a new Europe competing against us with war-sharpened brains and war-hardened muscles, not only in our foreign markets but also right here at home. If our industries are not to be caught slow of mind and flabby of muscle we must improve our business organization, must increase our manufacturing and merchandizing efficiency and must keep pace with every step in Europe's industrial progress.

"In considering our position after the war, I wish to talk chiefly about what we must do here at home, but I cannot talk to you on this subject without first referring briefly to what we must do in our foreign business. Next to England we have the greatest foreign trade of any nation in the world. Our exports and imports reach billions of dollars in value. Gentlemen, we must keep and expand that great trade. It means the full tide of prosperity for our factories and farms. It means the best comforts and conveniences of modern civilization for the families and homes of this country. But if we are to keep that trade and make it grow as a healthy business should grow, we must have the organization and the facilities needed."

Pennsylvania Distributes $5,400 for Best Care of Track—When General Manager C. C. Long, of the Pennsylvania Railroad, accompanied by some 400 operating officers, arrived in Harrisburg, after completing the first day of his annual track inspection, an aggregate of $5,400 in prizes was awarded to supervisors and their assistants for maintaining their sections of track in the best condition during the past year. The territory covered includes the main line between Pittsburgh and New York, and between Philadelphia and Washington.

The first or "Klondike" prize, amounting to $800 for the supervisor and $400 for the assistant, awarded for maintaining the best section of track throughout the past year, was presented to C. M. Wisman, supervisor, and H. M. Grimm, assistant supervisor, who have charge of the track from east of Liddonfield, Penn., to west of Plainsboro, N. J.

A special "Improvement" prize of $1,000, $700 to the supervisor and $300 to the assistant, for the greatest improvement made in the line and surface of a supervisor's section of track was awarded to J. E. McIntyre, supervisor, and W. W. Portser, assistant supervisor, who have charge of the track from Anderson, Penn., to east of Thompsontown, Penn.

The awards were made upon the basis of frequent inspections during the past year by a special committee appointed for the year.

Labor Unrest Hurts Trade — Unsettled labor conditions and the shortage of workers constitute to a large extent the only cloud upon the business horizon, according to a summary of reports from the twelve Federal districts to the Federal Reserve Board. Business is reported to be good in practically all districts, and in some it is described as most satisfactory and expanding. One disturbing element has been the crop shortage, not only of grains but of cotton. The prices of food products are constantly mounting.

Boston reports unrest in labor and cost of foodstuffs as disturbing elements, as does New York, Philadelphia, Cleveland and Richmond report serious shortage in labor. St. Louis says that increases in wages have not improved labor conditions.

The Kansas City report says: "Railroad shopmen are demanding an eight-hour day, with an increase of 5c. an hour in wages. Twenty-two Western lines and more than 25,000 employees are affected. Included are car repairers, boilmakers, machinists, sheet-metal workers, blacksmiths and electrical workers."

San Francisco reports that general business conditions are good, except in the lumber industry.

The White Motor Truck Co., of Cleveland, Ohio, states that in the construction of the new $4,000,000 high level bridge at Cleveland, now approaching completion, over 60% of the materials have been handled by motor trucks of its manufacture. The material handled by the trucks includes 543,000 sacks of cement, about 77,000 tons of sand and of limestone, and 109,000 cu.yd. of mixed concrete. The company has recently booked an order from Stedman Bent, a hauling contractor of Philadelphia, Penn., for 50 trucks of five tons capacity each. This is claimed to be the largest order for motor trucks ever given by a contractor. When this order is delivered, Mr. Bent will have a total fleet of 61 White motor trucks in service.

Jetty at New West Minster, B. C.—The Marsh Power Contracting Co., New Westminster, B. The City of Edmonton, Alta., is operating a hand paving plant for bituminous surfacing for street repairs with interesting and efficient results. The plant consists of a street tar kettle and stone heater; the materials are mixed by hand on a boiler sheet plate about 5-ft. square and hand tamped in place. This makes a very flexible and economical arrangement producing work of excellent appearance and fine wearing qualities, capable of resisting all ordinary traffic conditions. The cost of repair work of this nature averages about 75c. per sq.yd. The city is planning for the operation of a municipal paving plant.

SPECIAL OPPORTUNITIES SECTION

Contracts To Be Let

Bids received until Nov. 4, 1916.

Road Work

Atlantic City, N. J.

The Board of Chosen Freeholders of Atlantic County, N. J., will receive bids at Eleven o'Clock A.M. during a meeting to be held in Memorial Hall, New York Avenue, Atlantic City, N. J., November 4th, 1916, for extraordinary repairs to any number or all of the following roads, or to the three as a whole:

1—White Horse Pike from Absecon to Hammonton.

2—White Horse Pike from Hammonton to the Camden County Line.

3—Ocean Highway from Absecon to Sea View Golf Club.

Plans and specifications may be seen at the office of the Engineer for Atlantic County, N. J., Guarantee Trust Building, Atlantic City, N. J., where they may be obtained in return for a deposit of $10.00 for each set. Such deposit will be refunded if plans and specifications are returned by noon of November 6th, 1916. Bids must be made out on bidding blanks incorporated in the specifications.

The total work involved in the three roads is approximately as follows: Embankment, 8,736 cubic yards; Warrenite Pavement and Base Course, 287,475 square yards; Graveled Shoulders, 22,572 cubic yards; Gravel "C" for foundations, 14,853 cubic yards; Concrete Gutters, 5,366 square yards; Wooden Guard Rail, 20,500 lineal feet; together with quantity of Concrete Headers, Drainage Provisions, Catch Basins and other incidental items.

A certified check to the amount of $1,000 will be required with each bid and a contractor will be required to furnish a bond in the full amount of the contract price, which must guarantee maintenance for a period of five (5) years.

If the contract is awarded it will be conditioned upon the sale and delivery of bonds by Atlantic County for payment of the work under the contract, and a contract will not be executed and delivered to a contractor until said bonds have been issued, sold and delivered.

The right is reserved to reject any or all bids.

A. H. NELSON,
Engineer for Atlantic County.
DOMINIC CORSIGLIA,
Chairman of Road Committee.

Lumber Industry—Big orders in prospect for railroad cars and extensive paving contracts specifying blocks provide some elements of prosperity for the lumber industry. Among the railroads which have recently issued inquiries and the number of cars and the approximate amount of lumber which will be required are the following: Pere Marquette R.R., 1,000 forty-ton box cars, 4,500,000 ft.; New York, Chicago & St. Louis R.R., 500 40-ton steel underframe automobile cars, 2,500,000 ft.; Chicago & Alton Ry., 200 forty-ton automobile cars, 1,000,000 ft.; Atlantic Coast Line, 50 to 100 double deck forty-ton stock cars, 250,000 to 500,000 ft.; Chicago & Alton Ry., 300 furniture cars, 2,000,000 ft. In the paving field contracts let or to be let are for over 40,000 sq.yd. in Kansas City, 75,000 yd. in New Orleans, 21,000 yd. in Ft. Dodge, Iowa, while the entire length of Battery St. in San Francisco will have Douglas fir blocks, making it the biggest stretch of wood-block paving in California. Norfolk, Va., is contemplating contracting for 36,000 sq.yd., requiring approximately 1,300,000 ft. of lumber. Smaller contracts include 7,500 yd. of Southern pine for Galveston and over 8,000 yd. of fir for Seattle.

France—The annual fair at Lyons, France, will be held from Mar. 1 to 15, 1917, inclusive. Buyers from all parts of the world will be present, and it is desired to have as large a representation of American manufactures as possible. The State Department has placed $500 at the disposal of the American Consul, which will enable him to distribute the catalogs and other literature of American manufacturers who are interested.

The Jeffrey Manufacturing Co., Columbus, Ohio, has opened an agency with the Gustin-Bacon Manufacturing Co., a large and old-established firm of Kansas City, in order to establish closer coöperation with its customers in Kansas, Missouri and Oklahoma, and improve its service there. The Gustin-Bacon Co. will carry a line of Jeffrey transmission machinery, chains, buckets, etc., in stock. J. S. Davidson, who has spent several years in the sales and engineering departments of the Jeffrey Co. has associated himself with the Gustin-Bacon Co. and will handle all inquiries for Jeffrey products.

Construction News

PRICE CHANGES AND THE BUSINESS OUTLOOK

For the fall of a Presidential year, this one seems to be without precedent. Ordinarily business drops way below normal, the stock market is down, and everybody is on edge wondering who is to be our next President. This year business is going on in unabated volume, the stock market is having one of the busiest sessions ever known, and the question of our next President seems to have no effect whatever upon the general prosperity. The stock market still continues to do a heavy volume of business and prices, while not at the high record mark of the year, are still higher, particularly in the coppers and industrials, than they were previous to Sept. 1.

Gains of over 15 millions in total reserves and in net member bank deposits, and the large increase in the amount of acceptances held by the Federal Reserve Bank are indicated by the weekly bank statement issued by the Federal Reserve Board at the close of business on Oct. 27. Gold reserves show an increase for the week of 15.7 millions; aggregate gold holdings of the system, including the amount held by the Federal Reserve agents against notes issued, are now $617,481,000, a gain of nearly $125,000,000 for the last six months, and of over $192,000,000 for the last year.

The metal market is still continuing to show strength with the possible exception of antimony, which has dropped in New York during the past six months from 39c. a pound down to 13c., all other metals showing a slight increase over a month ago, particularly tin, which has advanced 2½c. and is now selling for 42c. Babbit metal has shown a drop in the past six months of about 10c. a pound on the best grade and 5c. on the commercial. Excitement in the pig-iron trade has been running very high for the past two weeks. On every hand signs are observable of consumers trying to protect requirements over all of next year. Price advances were sharp and to some extent were induced by bids submitted by consumers. A long expected burst of activity in pig iron has now arrived. Primarily a sudden upshoot in the coke situation brought the heavy buying of pig iron to the fore, but the heavy foreign absorption of iron filling up the gaps between production and consumption was the underlying factor. Virginia furnaces have been the chief sellers during the past week, while Buffalo furnaces made a special drive on last half 1917 business, taking orders for about 100,000 tons at about $19.50 for No. 2X before discontinuing selling. Bessemer iron sold repeatedly at $26 valley and at the close of the week sellers were holding for $30 valley. Basic iron sold at $22 valley and Virginia iron at $21.50 furnace. All these advances in price of pig iron mean still further increases in price of steel. The volume of business that is now in the market is estimated at a total of more than 1,200,000 tons. Of this aggregate domestic consumers are seeking about 400,000 tons of steel in various forms for delivery early next year. Foreign shell steel negotiations account for about 600,000 tons and miscellaneous foreign and domestic business makes up the balance. Bids were opened on Oct. 26 for four battleships and 20 destroyers, in which the Fall River Shipbuilding Corporation, of Quincy, Mass., was low on the battleships, and the Bath Iron Works, of Bath, Maine, was low on the 20 torpedo-boat destroyers. Railway equipment business continue one of the best features of the market. Inquiries for over 20,000 cars are now in the market. Last week contracts for 3,756 cars and 1,500 underframes were placed. One Pennsylvania mill acepted orders for 100,000 tons of steel from carbuilders, while October car orders are expected to total about 19,000, it was indicated that November business will be even larger. Orders for 58 locomotives were placed last week, while the month's business will reach an aggregate of close to 1,500 locomotives, a record-breaking month's total, due largely to the Russian order for 1,000 engines.

Steady increases in the shortage of cars on the railroads, accompanied by a corresponding decrease in the total surpluses for the month of September, are shown in the report of the Committee on the Relations Between Railroads of the American Railway Association, which was made public about ten days ago. This indicates that the carriers are facing one of the most serious shortages in the history of railroading, and bears out the complaints which are being made by the interior and Southern States, that they are unable to get back their equipment when it is passed to the Eastern roads. The increase in car shortage is general in all classes of equipment throughout the country, and figured by classes of cars as follows:

Box car surplus	12,863	Shortage	45,879
Flat car surplus	1,687	"	3,655
Coal and gondola	5,640	"	25,512
Miscellaneous	4,811	"	7,446
Not classified	1,200	"	4,730
	26,201		87,222

That conditions will not be as serious as last winter is generally believed as a result of better coördination among the carriers. The condition last year was not foreseen in time to permit the framing of any definite rules on the handling of freight. Since that time the roads have refused to accept goods for shipment except upon permits based upon contracts with steamship companies for space. Although construction work is falling off due to the lateness of the season, there is more work under way at present than there has been for a number of years, and the outlook is very good for the spring of 1917.

The Board of Directors of the United Alloy Steel Corporation, which was recently formed to take over the business and expand the operations of the United Steel Co., of Canton, Ohio, is composed as follows: Edward A. Langenbach, chairman, who is the president of the Berger Manufacturing Co.; Harry R. Jones, who is president of the corporation; E. D. Rogers, first vice-president in charge of sales, and president of the Buckeye Twist Drill Co.; E. L. Hang, secretary and treasurer; William H. Woodin, president of the American Car and Foundry Co.; E. H. Wells, president of the Babcock & Wilcox Co.; H. A. Colby, partner of Pickands, Mather & Co.; Bayard Dominick, of Dominick & Dominick; and John W. Prentiss, of Hornblower & Weeks. It is stated that the original capital of the United Steel Co. was $1,280,000, the par value of $100, and was turned in to the United Alloy Steel Corporation at $1,066 a share. It is also understood that the Ford Motor Co. takes half of the output of vanadium of the plant.

A. M. Anderson, representing the Oshkosh Manufacturing Co., manufacturer of concrete mixers, portable saw rigs, pumps and back fillers, and the John F. Byers Machine Co., manufacturer of the "Byers" auto crane, hoisting engines, derricks, derrick fittings and material elevators, has moved from 1440 Monadnock Blk. to 605 South Dearborn St., Chicago, Ill.

The Buffalo Steam Roller Co., Buffalo, N. Y., and the Kelly-Springfield Road Roller Co., Springfield, Ohio, will consolidate into one company to be known as the Buffalo-Springfield Road Roller Co. The main office and factory will be located at Springfield, Ohio, while the present branch offices at Boston, New York, Chicago, Pittsburgh, Philadelphia and Portland, Ore., will be continued. The consolidated company will constitute the largest concern in the world engaged exclusively in the manufacture and sale of road rollers.

A Russian Government Order for 1,000 locomotives stands supreme. This is the largest single locomotive order ever placed. Builders who are known to have shared in this contract have not as yet announced the receipt of the order, but it is known that the steel required has already been purchased. Other foreign locomotive purchases were sizable. The British War Office ordered 100 trench locomotives, the Paris-Orleans Railway 50 large engines, the Finland State Railways 20 large engines, a Spanish road 6. Other export orders came from Sumatra, South America and Africa. Domestic railroads were also active buyers of motive power. The Chicago & Northwestern ordered 77 locomotives and Wheeling & Lake Erie 10.

It is indicated that business to be taken by locomotive builders this year will be of record proportions. The orders received in the first ten months of this year are already in excess of the entire business taken in 1915, when orders for 2,101 locomotives were received. Up to the first of November orders for 4,023 locomotives were received and with foreign and domestic railroads in urgent need of equipment it is thought that the current year will show locomotive orders to a grand total of about 4,500.

Following is a comparative record of locomotive orders in the past nine months and for the same periods of 1915 and 1916:

	1916	1915	1914
January	258	54	77
February	563	60	142
March	510	140	240
April	250	120	162
May	328	165	132
June	326	130	116
July	81	120	98
August	148	110	130
September	263	170	110
October	1,387	234	130
Total ten month..s...	4,023	1,294	1,880

Crucible Steel Co. Earns Net Profit of $13,223,665—The annual report of the Crucible Steel Co. of America showed that the company earned net profits of $13,233,665 after paying dividends of $2,125,000 on the preferred stock and charging off $1,916,240 for depreciation and other fixed charges. The $25,000,000 common stock therefore earned slightly in excess of $50 a share. The balance sheet shows an unappropriated surplus of $9,543,606. The company has 4,390 holders of the preferred shares and 1,831 of common shares.

Jan. 1 to Nov. 1, 1910	205,844,000

These figures show that during the month of October for the territories given, contracts awarded amounted to $151,365,000 in the larger territories, and $44,303,000 in New York State and northern New Jersey. These figures show that the total of contracts awarded in October is considerably higher than any month in the past four. September had but $132,000,000, August $142,000,000, and July but $114,000,000. In the smaller territory, September had but $35,000,000, August $40,000,000 and July $29,000,000. This seems a little surprising on account of the lateness in the season, when in a normal year contracts would naturally commence to be more scarce.

A Completely Equipped Plant to Handle Reinforcing Steel—As an indication of what a staple line steel bars for reinforced concrete is becoming, an announcement made by the Republic Structural Iron Works Co. is of special interest. To take care of increasing business, this company has taken over the entire plant of the Avery Stamping Co., at 53rd and Lakeside Ave., Cleveland, Ohio, covering 100,000 sq.ft. On this site, following extensions, alterations and rebuilding, will be installed a complete plant for fabricating and shipping bars for concrete. Of special value to the contractors are the storage facilities developed. With this plant in operation, a contractor can place his order for a complete building. The steel can be fabricated, placed in storage and sent to the job as required. Facilities will be available for handling 4,000 tons of steel and more at a time.

The Great Advance in the Price of Railway Materials—The New York, New Haven & Hartford Railroad Co. in a circular to its officers and employees points out that the prices of all material and supplies used in the maintenance and operation of the railroad have been advancing continuously for more than a year, and that the advance during the last six months is even more serious than during the latter part of the year 1915. Accordingly, everyone is cautioned against waste. On all material excepting fuel, rails and ties, the average increase in price during the past twelve months has amounted, it is stated, to approximately 60%. During the year 1915 the company expended $4,787,000 for material of this description. At the present market prices the same amount and character of material would cost $7,659,000, or an increase of $2,872,000 for the year. It is therefore urged that every possible economy in the use of material and supplies be exercised—that repairs should be made instead of complete renewals in all cases where practicable, even where under normal conditions it might be better to renew than to repair.

A table is appended giving a list of a number of items of common use with the percentage of increase in the cost of each, as a matter of interesting and instructive information.

Arnold W. Brunner, noted throughout the United States as the designer of the Cleveland civic center and who has thought out many of the municipal problems of New York and other large cities, has been retained by the Board of Public Grounds and Buildings of Pennsylvania to design the grounds about the Capitol Building of Pennsylvania at Harrisburg, Penn. Warren H. Manning, landscape architect of Boston, who has been the consulting expert in Harrisburg's park development program of the last 10 years, was retained as Mr. Brunner's consulting landscape architect. The Capitol grounds which now occupy 16 acres are being extended to occupy 45 acres, and the designing of these new grounds is the big job ahead for Mr. Brunner although the old grounds are to be made to conform with entire scheme and to serve as a fitting setting to the Capitol building. The city will coöperate with the state in the work in the matter of widening streets about the Capitol grounds and so on.

Spain Increases Cement Production—The production of hydraulic cements in Spain has of late increased considerably in order to supply the domestic demand, as imports have fallen off. There are now 9 plants devoted to the making of portland cement, 5 of which are of comparatively recent construction. At present about 350,000 tons of cement are produced annually, and arrangements are under way to bring the output to 500,000 tons. As the domestic consumption of cement amounts to some 450,000 tons annually, a margin will remain for export. In 1913 Spain imported over 90,000 tons of cement, lime of all kinds and puzzolana, while in 1915 this figure decreased to 21,000 tons. Over half of the supply of 1913 came from France and considerable quantities from Austria and England. Judging from the amount imported during the first half of 1916, the whole year will show a marked decrease compared with 1915. Natural cement was produced in Spain in 1914 to the amount of 255,000 tons. Sixty-one plants were in operation, 12 of which were in the Province of Barcelona, 11 in the Balearic Islands and 11 in Gerona, the remainder being in Guipuzcoa, Tarragona, Lerida, Valencia and Huesca, embracing altogether 218 kilns and employing 1,430 hands. Six plants, with 16 kilns and 1,092 hands, produced cements of the portland class yielding 219,000 tons.

Men Wanted to Study Foreign Markets—Ten suitable men are wanted by the Bureau of Foreign and Domestic Commerce to serve as trade commissioners and special agents. They are to investigate foreign markets for American goods and are to be paid a salary not to exceed $10 a day, with all transportation expenses paid and $4 a day extra for subsistence. Examinations to secure the best men will be held in the larger cities of each State on Dec. 6.

The investigations to be conducted by these men are of the greatest importance. They are considered an important step in preparing the country to retain and expand its newly won foreign markets. Men are wanted to undertake the following investigations: Motor vehicles in Russia and the Far East; investment opportunities in Russia; fancy groceries in South America; furniture in South America; metal-working machinery and prime movers in Russia; metal-working machinery and prime movers in Brazil; jewelry and silverware in South America; hardware in Africa, the near East and India; ports and transportation facilities in Russia and the Far East; mineral resources in the Far East.

The duties of appointees to these positions will be to obtain information concerning the demand in foreign markets for the particular commercial line which they are to study, and to present the data obtained in straightforward, readable reports, which will enable American manufacturers and exporters to plan campaigns for the sale of American goods in the markets investigated. Applicants for the South American investigations will be expected to know Spanish and extra credit will be given for Portuguese. For work in Brazil, Portuguese is considered especially desirable. In the investigations including Russia, French is required and an extra credit given for Russian. No foreign language is required for the hardware investigation in Africa, the near East and India, nor for the investigation of the mineral resources in the Far East. No person will be admitted to any of these examinations who has not had previous training which would qualify him as an expert in the particular line to be investigated. This means substantial and responsible experience. An oral test will be given at Washington or some other city before final appointments are made and only those who pass successfully the written examination on Dec. 6 will be asked to present themselves.

Persons who meet the requirements and desire this examination should at once apply for Form 375, stating the title of the examination for which the form is desired, to the United States Civil Service Commission, Washington, D. C.; the secretary of the United States Civil Service Board, post office, Boston, Mass., Philadelphia, Penn., Atlanta, Ga., Cincinnati, Ohio, Chicago, Ill., St. Paul, Minn., Seattle, Wash., San Francisco, Calif.; custom house, New York, N. Y., New Orleans, La.; or old custom house, St. Louis, Mo. Applications should be properly executed and filed with the Commission at Washington in time to arrange for the examination.

Warehouse Facilities are taken up in an interesting manner by the National City Bank of New York in its November publication, from which the following is an abstract: "Memphis was one of the first cities to have good warehouse facilities, the warehouses of the Memphis Terminal Corporation having been opened in 1913. The plant of this corporation covers an area of 170 acres. The buildings are of concrete, equipped with the most extensive sprinkler system in the world, and served by 10 mi. of terminal railway. An overhead monorail system, built on a slight incline, enables one man and a mule to move 4,000 bales of cotton an average distance of ½ mi. daily. This is said to be equal to the work of 100 men, 100 mules and 100 drays under former conditions, when cotton was carted to and from storage houses. The risk of fire is reduced to the minimum, the lowest insurance rates are obtained, and the receipts of the Terminal Corporation are as first-class collateral for loans.

"Another splendid warehousing and terminal system is under development at New Orleans. This system is constructed and operated by the Board of Commissioners of the Port of New Orleans, a public body created under the laws of Louisiana. The plant occupies frontage on the Mississippi River, near the heart of the city, and includes concrete and steel warehouses, a million-bushel grain elevator, wharf houses at which both river and ocean steamers may load and unload, 20 mi. of railroad yards with storage capacity for 2,000 cars, and a belt line of railway giving connection with all the main lines of railway entering the city. Here is a complete coördination of all the agencies of transportation, with ample capacity for storage and complete facilities for handling. Runways and cranes connect every part of the structure, and compresses reduce cotton in transit to the smallest bulk, securing the lowest freight and insurance rates. All weighers, inspectors and samplers of coton are appointed by the New Orleans Cotton Exchange and represent that body. The total public investment in this system is approximately $5,000,000. Before the designs were adopted the latest terminals in New York, Philadelphia, Boston, Liverpool, London, Havre, Hamburg and other ports were studied. Work was begun early in 1915 and a portion of the terminal is now in use. The plan is to provide not only for the storage of the outgoing commodities like cotton and grain, but for coffee, jite, sisal and other standard package commodities.

"The Port of Seattle is a municipal district created by the legislature of the State of Washington, under the management of a Board of Commissioners, and this board has constructed since 1913 six public terminals, including transit sheds, wharves, storage warehouses, grain elevators, etc., fully equipped with all service apparatus at a cost of $6,000,000. They are of the modern fireproof type, and fortunately were partly completed in time to accommodate the flood of trans-Pacific freight moving through Seattle to Vladivostock, and return cargoes from the Orient. A seven-story concrete convertible fruit warehouse and cold storage, capacity 800 cars, and the fresh fish cold-storage plant, 2,000,000 lb. capacity, are nearing completion. The last report of the commission says that the warehouses have been practically filled as fast as completed, 'their peculiar appeal being fair charges, absolute protection to goods, efficient service, freedom from partiality as to railroads, steamships, transfer men or shippers, and the speed and low cost of interchange of commodities due to splendid physical arrangements and latest handling devices. For instance, salmon to the value of over six million dollars has been handled in the present season at two public terminals.'

"The Candler warehouses, which are at Atlanta, are of the most approved type and already represent an investment of $1,000,000, with plans for extensions. This location is in the heart of a great cotton-producing district, and is bound to be of great value to the producers in providing a safe, cheap place of storage, which can be used by them and by local dealers. With such accommodations the South will be able to withhold its cotton crop from the market in the crowded fall season and sell it during the year as it is wanted by the consumers.

"Several of the Southern States within the last 2 years have passed acts providing for bonded public warehouses, and the last appropriation act passed by Congress for the support of the Department of Agriculture at Washington creates a system of warehouse license and inspection under that department. The licensee is required to give bond in such terms and conditions as the Secretary of Agriculture may prescribe, including the requirements of fire insurance, for the protection of those depositing commodities in his care.

"All of these provisions help to perfect the organization and equipment by which commodities are moved from producers to consumers, reduce the risks and cost, and therefore are to be welcomed."

IMPROVED WATER-WORKS
CONTRACT NO. 3

Lima, Ohio.

Sealed proposals will be received at the office of the Director of Public Service, City Hall, Lima, Ohio, until twelve o'clock noon, central standard time, of the fourteenth day of December, 1916, and then publicly opened and read, for the construction of improvements to the water-works, contract No. 3.

The work to be done under Contract No. 3 will consist of the construction of a large storage reservoir in Lost Creek Valley, concrete spillway, auxiliary pumping station, force main and all appurtenances.

The work will include the construction of dikes containing approximately 300,000 cu.yds. of earthwork, the material for dikes to be secured from the excavation for a new creek channel and from borrow pits. The work also includes 40,000 sq.yds. of slope protection work, 2,500 cu.yds. of concrete, 340 tons of cast-iron pipe, valves and two small brick buildings.

Copies of the plans, proposal forms, specifications and forms of bonds and contract can be seen at the office of the Director of Public Service, Lima, Ohio, or at the office of "Engineering News" and of "Engineering Record," New York, and "Engineering and Contracting," Chicago, or may be obtained at the office of either of the Consulting Engineers, R. Winthrop Pratt, Hippodrome Building, Cleveland, Ohio, and Wm. G. Clark, Spitzer Building, Toledo, Ohio. A deposit of Twenty-five ($25.00) Dollars will be required for each set of plans and specifications, which sum will be refunded if plans are returned in good condition within ten (10) days after the award of the contract. Extra copies of the specifications may be obtained upon payment of Two ($2.00) Dollars for each copy, which sum will be refunded if returned copies are in good condition. All checks shall be made payable to the Director of Public Service of the City of Lima, Ohio.

The bid bond will be for ten (10) per cent. of the amount of the proposal.

The performance bond will be for seventy-five (75) per cent. of the amount of contract.

The Director of Public Service reserves the right to reject any or all bids.

BUILDING OPERATIONS FOR NOVEMBER

Following is a list of contracts awarded published by the F. W. Dodge Co. throughout the States of New England, New York, New Jersey, Pennsylvania, Maryland, Delaware, District of Columbia, Virginia, Ohio, West Virginia, Illinois, Indiana, Iowa, Wisconsin, Michigan, North and South Dakota and portions of Missouri and eastern Kansas:

January 1 to December 1, 1916	$1,243,998,397
January 1 to December 1, 1915	857,190,100
January 1 to December 1, 1914	677,920,300
January 1 to December 1, 1913	798,117,500
January 1 to December 1, 1912	803,391,500
January 1 to December 1, 1911	735,283,813
January 1 to December 1, 1910	756,284,931

Contracts awarded throughout New York State and northern New Jersey:

January 1 to December 1, 1916	$255,381,500
January 1 to December 1, 1915	155,154,500
January 1 to December 1, 1914	121,598,000
January 1 to December 1, 1913	235,694,500
January 1 to December 1, 1912	211,282,500
January 1 to December 1, 1911	215,839,500
January 1 to December 1, 1910	233,081,000

These figures show that this is the largest year in contracts awarded which we have had since 1909, being $400,000,000 over 1915, which is the next largest year. In the smaller territory, being $15,000,000 over the next largest year, which was 1913. For November for the entire territory in this table, the contracts awarded amounted to $122,382,000, and for the smaller territory $30,275,000. These figures, while they are considerably lower than any of the previous months, still show a tremendous amount of construction work for this time of year In the smaller territory the figures for November beat those of July by a small margin of about a million dollars, which is surprising, as July should be one of the largest months for construction we have.

Chinese Railways—Efforts are being made to revive the project of railway extension in Anhui Province planned some time ago. Routes from Hangchow to Kuangteh and Hweichow have already been surveyed, and arrangements are now being made between the Chekiang and Anhui promoters and the representatives of the Shanghai-Hangchow Nanking Ry. The completion of this railroad will bring Mokanshan summer resort within a few hours of Shanghai, and will also afford transportation for the stone of the Shanghai Municipal Pingchiao quarry to Hangchow and Shanghai. It is proposed to induce the Government to hasten the building of the line, which will be beneficial to all interests in Anhui. Construction work on the Canton-Hankow railway has continued despite the war, but it will be impossible to push on to completion the section from Wuchang to the border of Kwangtung Province, where it is to join with the section being constructed from Canton northward. Connection will, at all events, be made between Wuchang and Changsha, the capital of Hunan, a distance of 225 mi., by the end of this year. Bridging is proving exceedingly expensive and difficult, the rise of water from low to high tide being about 40 ft., and necessitating unusually high bridges. Some 52 mi. of rails have already been laid south from Wuchang, and it is hoped soon to operate a regular service.

Louis C. Kelsey, Consult. Engr., has opened a branch office in the Twin Falls Trust Bldg., Twin Falls, Idaho. Main offices will be retained at 410 Selling Bldg., Portland, Ore.

The Construction and Repair Division, Headquarters Southern Department, Office Department Quartermaster, Fort Sam Houston, Tex., would like to receive from material dealers and manufacturing companies, catalogs and price lists of all supplies handled by them.

The Lidgerwood Manufacturing Co., New York, has opened a branch office in the Hibernian Bldg., Los Angeles, Calif. Charles A. Baechtold is in charge.

The Ransome Concrete Machinery Co., Dunellen, N. J., has been obliged to make an advance of 10% in the list price of all machinery, and probably will make another advance of 10% in the selling prices after Jan. 1, 1917. This is owing to the scarcity of raw materials and labor due to the exportation to European countries of war munitions and materials.

The Terry Steam Turbine Co., Hartford, Conn., announces the appointment of Stephenson & Nichols, Monadnock Bldg., San Francisco, Calif., as its representative in northern and central California and the northern part of Nevada.

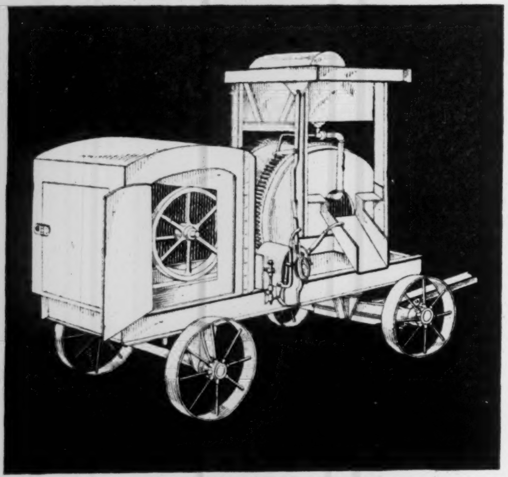
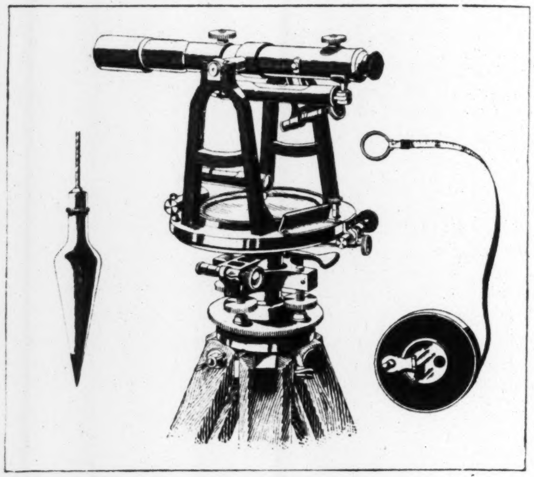
See How the Ormay Process Brings Out the Details





SMALL but important points of mechanical subjects which are ordinarily lost in halftone illustrations come out with startling clearness in Ormay Process cuts.

These cuts combine the exactness of the line etching, the brilliancy of the wood cut and the finish of the halftone—a combination permitting of striking results in advertising or catalog illustrating. Ormay Process cuts will add to the value and attractiveness of any piece of printed matter which makes use of them. Their distinctive qualities are sure to attract favorable attention.

We are prepared to furnish any amount of these illustrations, without restrictions as to where they shall be used. If you are getting out any new printed matter we would be pleased to have you get in touch with us. We can work from any kind of copy—rough pencil sketches, finished drawings or photos.

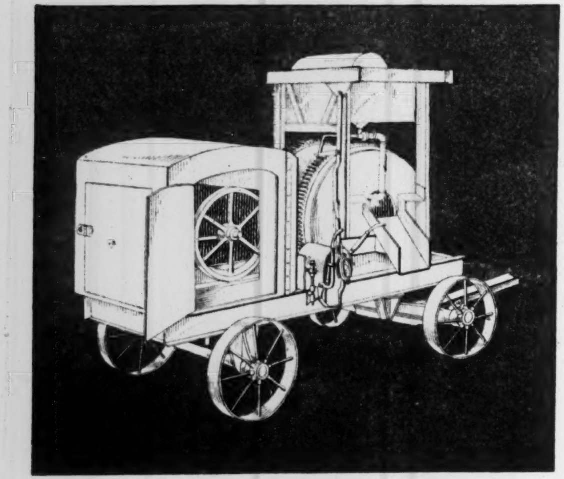
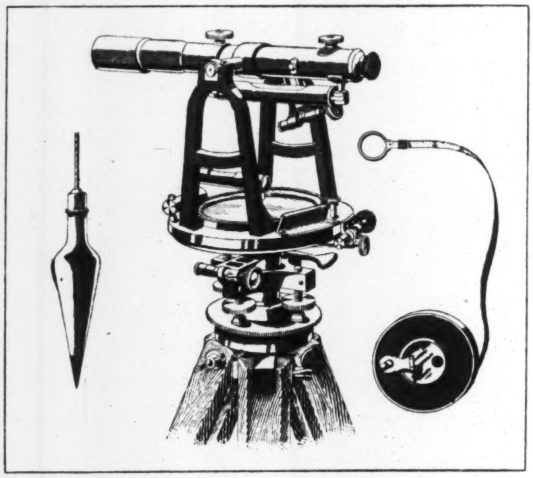
See How the Ormay Process Brings Out the Details





SMALL but important points of mechanical subjects which are ordinarily lost in halftone illustrations come out with startling clearness in Ormay Process cuts.

These cuts combine the exactness of the line etching, the brilliancy of the wood cut and the finish of the halftone—a combination permitting of striking results in advertising or catalog illustrating. Ormay Process cuts will add to the value and attractiveness of any piece of printed matter which makes use of them. Their distinctive qualities are sure to attract favorable attention.

We are prepared to furnish any amount of these illustrations, without restrictions as to where they shall be used. If you are getting out any new printed matter we would be pleased to have you get in touch with us. We can work from any kind of copy—rough pencil sketches, finished drawings or photos.

Canal Improvements

STATE OF NEW YORK
OFFICE OF SUPERINTENDENT OF PUBLIC WORKS.

Albany, Dec. 21, 1916.

Sealed proposals will be received by the undersigned at his office in the Capitol at Albany, N. Y., until twelve o'clock noon of Tuesday, January 9th, 1917, at which place and hour they will be publicly opened and read, for improving the New York State canals pursuant to the provisions of Chapter 147 of the Laws of 1903, and of the acts amendatory thereof and supplementary thereto, and Chapter 570 of the Laws of 1915, as follows:

CONTRACT NO. 155.
Erie Canal—Section 2.

For furnishing and installing seven hoists for the operation of the bulkhead gates in the north end of the Vischer Ferry dam; to be completed within two months after the date of the execution of the contract. Estimated cost, $9,998.00. The plans consist of five sheets, numbered 1 to 5 inclusive.

Plans may be seen and detailed specifications, engineer's estimate of quantities, proposal blanks, form of contract and bonds required and other information for proposers may be had at the office of the Superintendent of Public Works at Albany, N. Y.; at the office of the Assistant Superintendent of Public Works for the Middle Division at Syracuse, N. Y.; at the office of the Assistant Superintendent of Public Works for the Western Division at Rochester, N. Y., and at the canal office, Spaulding's Exchange, Buffalo, N. Y.

Copies of detailed plans or drawings may be obtained from the State Engineer and Surveyor at Albany, N. Y., upon payment to him of the cost of producing them.

Monthly estimates will be paid of ninety per centum (90 per cent.) of the work done at the contract price. Every proposal for said work must be accompanied by a money deposit in the form of a draft or certified check upon some good banking institution in the city of Albany or New York, issued by a national or state bank in good credit within the state and payable at sight to the Superintendent of Public Works for five per centum (5 per cent.) of the amount of the proposal.

The person whose proposal shall be accepted will be required to execute a contract and furnish bonds within ten days from the date of notice of award delivered to him or them in person or mailed to the address given in the proposal.

Upon execution of the contract and approval of bonds, the certified check or draft will be returned to the proposer unless the same shall have been presented for collection prior to such time, in which case the amount of the deposit will be refunded by the Superintendent of Public Works.

The deposits of bidders other than the one to whom the award of contract shall be made will be returned immediately after the award has been made.

The bond required for the faithful performance of the contract shall be in such sum as shall be fixed by the Superintendent of Public Works, which sum shall not be less than twenty per centum (20 per cent.) of the estimated cost of the work according to the contract price, and an additional bond, known as the labor bond, in the sum of ten per centum (10 per cent.) of the amount of the estimated cost of the work according to the contract price, will be required as security that the contractor will pay in full at least once in each month all laborers employed by him upon the work specified to be done in the contract.

In the event that more than one surety company is offered as surety on said bonds, co-insurance only will be accepted.

Each proposal must be addressed to the Superintendent of Public Works, Albany, N. Y., and must be endorsed on the envelope with the name of the construction for which the proposal is made.

Award, if made, will be made to the person or persons whose proposal shall be lowest in cost to the state for doing the work and which shall comply with all provisions required to render it formal. Before any award shall be made the lowest bidder will be required to satisfy the Superintendent of Public Works of his ability to provide suitable equipment and materials for the proper performance of the work.

The right is reserved to reject all proposals and readvertise and award the contract in the regular manner if, in the judgment of the undersigned the interests of the State will be enhanced thereby.

W. W. WOTHERSPOON,
Superintendent of Public Works.

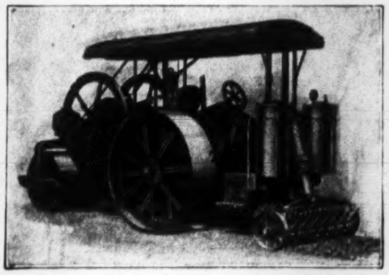
THE LATEST THING IN ROAD. SCARIFIERS

The Austin Motor (Kerosene) Roller has received a further enhancement to its high value as a road builder



The Austin Pneumatic Scarifier Attachment

For general maintenance work, no greater labor saving device has ever been placed on a road roller. The Austin scarifier utilizes the weight and power of the roller to tear up old road surfaces in the most approved manner. The engine power is used for every movement, the teeth or tynes being pulled direct from the roller main frame, while the device is raised and lowered, quickly and simply, by compressed air supplied to the scarifier cylinder from the tanks on either side of same. The air is compressed by a two-cylinder compressor mounted above the engine cylinder and operated from the engine crank shaft.

Important Features

The operator can control every movement from his position at the roller steering wheel.

The scarifier does not interfere with the regular working parts of the roller.

It can be attached to any standard Austin 10-ton or larger roller.

Every part is accessible; nothing out of reach or out of sight.

The users of this scarifier attachment have indorsed it as a *perfect machine for the purpose.*

Write for our new scarifier circular.

Three-inch Roller Bearing Pulleys.
Interlocking one-piece Meeting Rails.
Double rise of Sill, excluding snow and water.

They embody the very latest ideas for mill, loft and factory requirements. Every one of them helps toward better weather exclusion or cheaper maintenance.

And remember that Lupton welding doesn't mean a dab here and there—it means complete fusion into a permanently rigid unit.

LUPTON STEEL SASH
COUNTERBALANCED TYPE

is distinguished by the use of the specially rolled and welded sash members, and the one-piece head and sill here shown. No riveted-on weathering members are used; even the meeting rails are specially rolled. The double offset in sill is another exclusive Lupton feature.

Owing to the simultaneous movement of the upper and lower sash in opposite directions, equal top and bottom ventilation is assured. Hence this type of sash is especially desirable for multi-story buildings with side wall ventilation.

Home Made—But a Winner!

How a Westinghouse 10½-Inch Cross Compound Compressor Won a Contract

Three New York City contractors were hurriedly called to bid on a rush job requiring air tools. None of them had an air outfit, and the earliest delivery obtainable was four weeks on a $2,500 outfit, consisting of boiler, compressor, tank and truck. One contractor, more resourceful than the others, telephoned our local representative, and in less than 48 hours a compressor and tank were on the ground. These were mounted on an old mule wagon in jig time, anchored, and coupled by a pipe to a neighboring steam roller. Inside of 60 hours this home-made outfit, costing less than $500, was busy on the job which netted the resourceful contractor $3,800 in two weeks.

It Carries More Water for Its Diameter Than Any Iron Pipe

WYCKOFF WOOD PIPE is not impaired by the effects of electrolysis acid fumes or corrosion.
It is light, strong and very durable. Lengths, 6 ft. to 12 ft. long.
Size for size, it carries 14% more water than iron pipe.
Costs less for transportation because it is lighter and easer to handle.

May we send Catalog giving fullest details?

JOINT

Engineers and Contractors used to say,
"I would like to try it"
Now they say,
"I am going to keep on using it"

Consider the practical features that make the Meriwether System of Lock Joint Pipe ideal for sewer work.

Pipe made at the job by local labor, of local material when possible. Every foot inspected before being lowered in trench. And finally, there's the **joint**—doubly reinforced for strength—smooth, and absolutely watertight. The success of Lock Joint Pipe is splendidly illustrated in our 100-page Bulletin. WHAT YOU WANT IN A LOCOMOTIVE

BROOKS-CALLAWAY COMPANY
ATLANTA GA
101

Every locomotive must have Reliability, Efficiency and Durability.

To secure reliability every part must have just the right amount of the right material in the right place. Materials must pass rigid inspection and tests. Generations of experience in building locomotives is back of every locomotive we build.

Efficiency means readiness to perform a day's work every day. You know how the work stops when the locomotive is out of service. We guard against breakdowns by the material and the design.

Durability is obtained because every part is made with reference to long life. Every part is made interchangeable for each size of locomotive, so that worn parts may be quickly replaced without a machine shop. This is most important in keeping the locomotive on the job.

CAREY **Elastite** EXPANSION JOINT
The original and only Elastite Joint.

One Process Instead of Seven

The old way of making an expansion joint involved:

1—Placing the spacing strips.
2—Coming back and removing strips after grouting is finished.
3—Hauling tar kettle and barrels of tar to the job.
4—Melting the tar or pitch or asphalt.
5—Pouring the melted filler.
6—Cleaning up.
7—Removing the kettle and hauling away the old strips.

The new way consists of one process only—laying the strips as they are delivered to the job direct from our factory. And when you are done *you are done.*

Are Drilling the Storm King Road

The John L. Hayes Const. Co. is building a 5-mile N. Y. State Highway on the sides of Storm King and Crow Nest Mountains. The rock is a hard bastard granite, partly solid and partly boulders up to 250 yards in size.

There are 12 "Jackhamers" plugging away, excavating in places where it is barely possible for a man to stand. At times ropes and canvas slings are the drill runners sole support.

Road contractors, whether their work calls for a mountainside cut or for simple trench digging, find the reliable "Jackhamer" an unequaled drill for all around, day in and day out service.

For operating these drills the Company's Portable Compressors offer complete, ready for work units with a choice of gasoline or electric motor or steam engine drive.

OSGOOD

The OSGOOD "18" ¾ yard, traction, revolving steam shovel is designed and built for the lighter class contracting, such as road grading, cellar excavating, sewer trenching, stripping, loading and unloading cars, and in fact, the general line of excavating contracting. The boom raising and lowering device, which can be quickly and easily installed on any standard shovel, enables the operator to dig sewer trenches to a great depth. By attaching a long structural steel boom, in place of the heavy armored boom, the OSGOOD "18" will handle a clam shell bucket or do crane service efficiently.

Can You Tell a Good Hoist?

Can you distinguish a good hoist from one not so good by looking at them? Of course you can't! And the chances are you don't even think you can. The thing that determines the quality of a hoist is what it will do and how long it will do it. So when you buy a hoist you judge its merit by the performance of others like it in actual use. That is why you can best serve your own interests by investigating the great record of Clyde Hoists. They have the power, durability and stamina to meet the severest requirements. Does the Work of an Army of Men

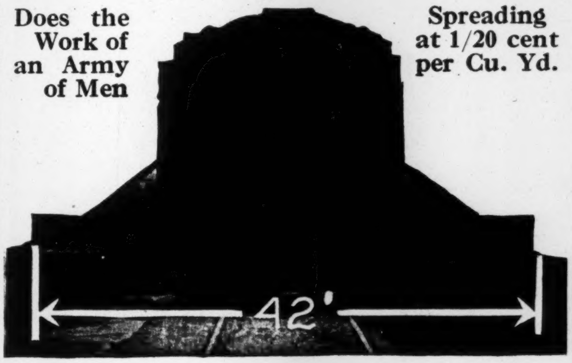
Spreading at 1/20 cent per Cu. Yd.



The JORDAN SPREADER

42 feet from tip to tip is the reach of the wings of the Jordan Spreader.

Think of it. Working from one track you can spread fill for two additional tracks at once.

Or on large grading operations you can move the face out 21 feet each trip. The Jordan cuts 20 in. below top of rail or 14½ in. above.

No wonder it so reduces costs of hand work. 1/20 of a cent per cubic yard is a very conservative figure. **Are you approaching this?**

The Proof of the Pudding is in the—After Taste

AETNA

Low-Freezing Standard Dynamites

(Low-Freezing Ammonia)

leave that pleasant "after taste" with you when used for your Blasting. They leave it with your pocket-book, too, by reason of their low cost, their great disruptive power and by the elimination of unnecessary thawing in cold temperatures.

Many of the largest consumers are now most satisfactorily using Aetna Low-Freezing Standard Dynamites (Low-Freezing Ammonia) in place of the more expensive Nitro-Glycerin and Gelatin Dynamites heretofore employed. You have an equal chance to make this gain.

Write to us direct, or to our nearest Branch Office, and let us give you more details of the advantages and saving in cost to be gained by using Aetna Low-Freezing Standard Dynamites.

Here Are the Pertinent Facts About BONANZA CEMENT TILE ROOFING

Two interesting bulletins on Bonanza Cement Tile contain a story that has awakened builders' and plant owners' confidence from coast to coast. Sent free on request.

Briefly stated, "Bonanza" is a large reinforced cement tile, with a red outer surface, laid directly on steel channel purlins of standard width. No sheathing or waterproof covering is needed. Bonanza is remarkably light in construction (less than 14 pounds per square foot—the equivalent of slate on 2-in. sheathing), and readily applied. It presents a most pleasing appearance, is fireproof and waterproof.

BONANZA—a roof of quality with the backing of reputable manufacturers. **All roofs laid by us and absolutely guaranteed.**

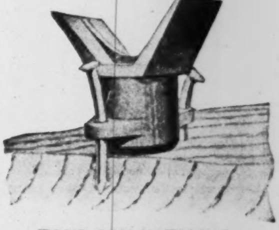
TRUS-CON SLOTTED INSERTS

The long slot permits wide adjustability in location of bolt. Can extend continuously for any length desired by butting inserts end to end. Only 1⅛-in. deep, not interfering with einforcing steel nor reducing the strength of construction. Standard lengths 18, 24, 36, and 60-in.

KAHN ADJUSTABLE SOCKET INSERTS

Made of malleable iron, allow a small amount of adjustability for bolts and are furnished for ½, ⅝ and ¾-in. bolts.



TRUS-CON NATIONAL INSERTS

Made of highest grade grey iron furnished regularly tapped for ¾-in. bolts, also for ½-in. and ⅝-in. bolts.

Inserts In Concrete Buildings

provide a quick and simple means of attaching shafting and fixtures. Expensive drilling into the concrete is eliminated. Because of the adjustability of these inserts, the location of shafting and fixtures may be easily changed as desired. Made in a variety of styles to meet every requirement. Every concrete factory should be amply supplied with Trus-Con Inserts.

Keeping up the Factor of Safety

RED-LEAD on steel girders, beams, struts and columns is one sure way to prevent rust and the consequent lowering of the factor of safety of metal structures. It only takes a short time for the progressive action of rust to honeycomb steel and reduce its tensile and shearing strength.

The PENNSYLVANIA RAILROAD BRIDGE over the Ohio River at Louisville is a good example of the efficiency of red-lead as a rust preventive. Built in 1870 and repainted in 1877, 1889 and 1901—each time with pure red-lead—it has remained rust-proof for forty-six years. It is about to be replaced as inadequate for the increased traffic demands and the new bridge will be painted with

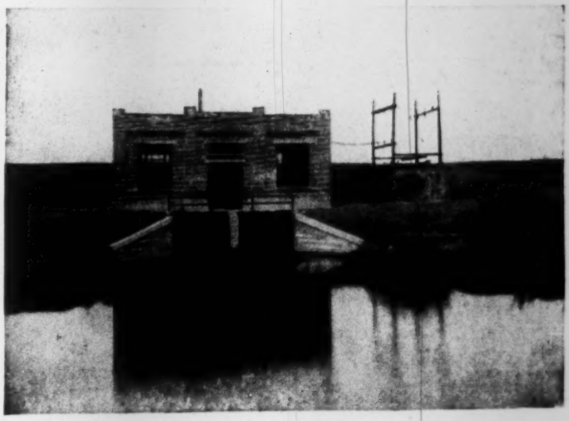
AMERICAN

Built at Less Cost Than Any Other Mississippi Valley Drainage Pumping Plant of Equal Capacity



Low cost for construction and small expense for operation are features wherein the Marion County Drainage Pumping Station excel all other drainage pumping plants of equal capacity in the Mississippi Valley.

The Marion County Drainage District is located a few miles above Hannibal, Mo., contains 4,000 acres of fertile soil and has a watershed of 6,500 acres. This district has one electrically-operated drainage pumping station: the designing of levees ditches and pumping station and superintendence of work being done by The Edmond T. Perkins Engineering Co. of Chicago and Quincy, Ill.

The pumping station contains two 30-in., Type W "American," solid shell, all iron, double suction centrifugal pumps driven through silent chains from two 100 H.P., 3-phase, 25-cycle, 440-volt, squirrel cage, General Electric motors running at 480 R.P.M. Pumps operate singly or in parallel, pumping against a static head ranging from zero to 14 ft., depending upon the stage of the river and the level of water in ditches within levee.

These pumps operate at two speeds, depending on the head. Speed is varied by changing the size of chain pinion on the motor shaft. For static heads from zero to about 10 ft. the smaller sprocket is used delivering respectively from about 25,000 to 15,000 G.P.M. When static head is from 10 to 14 ft., which rarely occurs, the larger sprocket for higher speed is used which maintains an equal range of capacity. In this way pump efficiencies range from a minimum of about 65% up to about 80%.

Exterior and interior views of this pumping plant are shown in the accompanying illustrations. The water passes from the suction bay through cast iron suction piping and Y's to the pumps and out to a fore-bay common to the two pumps and a part of the gravity culvert through the levee.

Electric current at 11,000 volts originating at Keokuk is transmitted across the Mississippi River from Illinois by a submarine cable and is stepped down outside the plant for operating power to 440 volts.

This is only an example of the economy of "American" Centrifugal Pumps in many drainage pumping plants throughout the Mississippi Valley.

Catalog 132 describes these pumps.

Barrett Specification Roofs

Guaranteed for 20 Years

We Standardized the Roofs—Now We Standardize the Guarantee!

A DOZEN years ago the introduction of The Barrett Specification standardized roofing practice throughout the country and gave to the old "tar-and-gravel roof" a definite character and reliability.

Local contractors, in the past, have been accustomed to guaranteeing roofs of this type, free of repairs for from five to ten years.

To good reliable roofers such guarantees were no burden because the roof they constructed would last much longer than the guaranteed period.

The fly-by-night roofer, however, did a poor and cheap job, gave his guarantee recklessly—and was generally out of business when the roof leaked or trouble came.

As manufacturers of the materials used in Barrett Specification Roofs we, therefore, determined a short time ago to standardize these guarantees and *make them of real value to users of Barrett Specification Roofs.*

We, therefore, arranged with the U. S. Fidelity & Guaranty Company to issue a 20-Year Guaranty Bond covering every Barrett Specification Roof of 50 squares and over *wherever our inspection service was available.*

Today this Guaranty and Inspection Service covers all towns of 25,000 population and over and most of the smaller places in the thickly populated parts of the United States and Canada. This means that only 5% of the population is outside the radius of our Guaranty.

This bond takes the place of short-term guarantees formerly issued by the local roofer and obviously is far better because:

—it is for 20 years (instead of the usual five or ten)

—it is backed by a $15,000,000 Corporation

—it has the further backing of a great Surety Company

—it provides for an *impartial expert inspection of the job.*

How to Get the 20-Year Guaranty

When you are writing your roofing specification say:

> "The roof shall be a Barrett Specification Roof laid in accordance with The Barrett Specification, dated May 1, 1916, by a roofing contractor approved by The Barrett Company. The roofing contractor shall furnish The Barrett Company's Surety Bond Guaranty for twenty years, in accordance with Note 1 of said Specification."

On this solid and honest basis as many contractors as you desire may estimate on the job.

The winning contractor notifies us that he wishes the 20-Year Surety Bond and requests our Inspection Service.

One of our inspectors supervises the construction of the roof, tests it by cutting a cross-section, checks up the quantity and the quality of the materials used and certifies that The Barrett Specification has been strictly followed.

On the basis of the inspector's report the 20-Year Guaranty Bond is issued by the U. S. Fidelity & Guaranty Company, and the bond exempts the owner from all expense for repairs or maintenance for the next 20 years.

The Guaranty Bond costs you nothing. The service is free *in the interest of good workmanship and the good repute of our materials.*

While we guarantee Barrett Specification Roofs for only 20 years the chances are that they will last much longer.

We know of instances where this type of roof has lasted twice as long without any expense.

Barrett Specification Roofs are recognized today as the standard covering for permanent buildings of all kinds. The cost, per year of service, is less than any other roof covering. They take the base rate of insurance and are approved as "Class A" construction by the Underwriters' Laboratories, Inc.

If you are interested in the proposition we shall be glad to send you further details on request.
